TEAM LED

AI-native engineering and product leader who pairs deep technical depth (ex-SDE3) with product strategy. Grew with one company from engineer to Director across a decade — now leading both Engineering and Product for Increff's next-generation merchandising analytics platform. Proven at 0→1 and 1→10: built a product org from zero and scaled a SaaS suite to \$12M+ ARR while institutionalizing AI across product and engineering.

Core expertise: Hybrid product + engineering leadership · platform-over-throughput thinking · AI-native product operations · deep retail-merchandising domain (assortment, OTB, markdown, replenishment).

EXPERIENCE

Director of Engineering & Product — Increff

2026 — Present

Increff = retail supply-chain SaaS (WMS / OMS / Merchandising) · 100+ brands · ~\$12M ARR

- Promoted to lead **both Engineering and Product (~40 people)** for Increff's Merchandising platform, reporting to the CTO and CEO.
- Own end-to-end a **next-generation retail merchandising analytics platform** — a one-stop, configurable, AI-agent-powered system that lets retailers self-serve any merchandising workflow.
- Driving Increff Merchandising from **10 → 100 customers**, architecting the platform to scale toward **10,000**.

Senior Technical Product Manager → Product Head — Increff

2022 — 2026

- Established Increff's **Product function from zero**; owned the roadmap for a **six-product suite** — WMS, OMS, SFS, TMS, and an Integrations platform — serving **100+ brands across 30+ countries**.
- Led the **platformization of Increff's Warehouse Management System** — unlocking serialized → non-serialized capabilities and a scalable product-to-platform architecture — **expanding TAM** and opening entry into multiple new segments.
- Instituted an **AI-first product organization** — prototyping and workflow automation via AI agents, MCPs, skills, and custom workflows — massively cutting prototype-creation and design-to-code time, **since January 2025, well ahead of the curve**.
- Architected and drove **enterprise rollouts** for Increff's largest clients — Meesho, Landmark, Arvind, Al-Abdul Karim, Puma, Adidas.
- Lifted on-time delivery from **60% → 80%** by inventing a unique **Return-on-Attention (ROA) prioritization framework** that prioritizes across all 6 products.
- Hired, led, and mentored **3+ product managers** who now independently lead their own platforms.

SDE3 / Acting Technical Product Manager — Increff

2021 — 2022

- Built the foundational **OMS and SFS** as standalone sellable products (now **50+** and **10+** clients); transitioned from engineering into product.
- Architected order-splitting, async inventory allocation, virtual combos and expiry workflows that raised inventory utilization and **expanded TAM**.

Software Development Engineer (SDE I-II) — Increff

2017 — 2021

- Architected core WMS/OMS modules and an inventory-tracking system at **99.9% accuracy across millions of SKUs** (a key enterprise selling point); drove TDD to **90% coverage**.

Software Development Engineer — Investnet Yodlee

2016 — 2017

- Built an internal Bugzilla productivity tool (XML-RPC) and resolved critical defects in the Personal Finance Manager product.

Spring

Python

Kubernetes

Distributed Systems

FRAMEWORKS & SYSTEMS I BUILT

Two-Clock Release & Delivery model — feature-flag-gated continuous merge paired with controlled monthly client releases, eliminating pod blocking and unsafe rollbacks.

Return-on-Attention (ROA) prioritization — a unique framework that aligns priorities across all 6 products and killed urgent-critical churn.

AI-first interface strategy — exposing the platform as an intelligent backend (MCP + skills layer) so enterprise AI assistants drive merchandising decisions in natural language.

EDUCATION & CONTINUOUS LEARNING

B.Tech, Information Technology — National Institute of Technology, Srinagar · 2016

Product Sense — Shreyas Doshi / Maven (2024) **Product Leadership** — Reforge (2023) **Continuous Product Discovery** (2023–24)

Supply Chain Management — MITx / edX specialization (2020–21)
